Environmental Policy

As a leading electronic component distributor with associated connector assembly, TTI is committed to environmental stewardship and social responsibility. To accomplish this, we pursue a number of programs that protect and improve our environment and foster ethical and safe working environments. We believe that being a responsible corporate citizen contributes to the achievement of our mission to provide a home for hard working, dedicated, knowledgeable, ethical people who believe in this company and this philosophy.

Our guiding principles:

- Fulfill the responsibility of trustee of the environment for this and future generations. Reduce and minimize energy and water consumption and material pollution prevention through continual improvement of our environmental management system using recycled materials and earth friendly substances whenever practical. Lessen our impact, reuse, recycling and reduction.

- Determine the significant environmental aspects over which the organization has control, and with this context, set and review applicable environmental objectives and targets through periodic meetings.

- Comply with relevant environmental legislation and regulations and with other requirements to which the organization subscribes including ISO 14001.
