

Amphenol Sensors

Connecting your world through
Sensing Innovations

Commercial Aerospace Applications

Amphenol Sensors is a leading innovator in sensing technologies and measurement solutions. Offering the most diverse sensor portfolio of standard and customized products for the world's most demanding regulatory and industry-driven applications, Amphenol creates value by providing critical information for real-time decisions.

With its breadth of sensing capabilities and technologies, Amphenol Sensors provides solutions that make safe and efficient commercial air flights possible. From cabin comfort to aircraft ice protection, our sensors play an integral part in many aerospace applications, including avionics, engines, fuel systems, airframe and in-cabin environment. And, just as industry needs and trends are evolving, Amphenol Sensors is constantly evolving to integrate and enhance available sensing technologies for next-generation solutions.

Amphenol Sensors

Commercial Aerospace Sensing Solutions

AIRFRAME AND AVIONICS

Temperature Sensors

Prevents ice formation on vanes during flight.

- Self-regulating properties - Power will adjust to prevailing conditions with ~10x variation in output
- Higher reliability than wire-wound products
- Special shapes to suit customer design

THERMOMETRICS

Temperature Sensors

Precision temperature measurement of in-flight instrumentation and climate control.

- Excellent long-term stability
- High reliability
- Multiple rugged configurations available

THERMOMETRICS

Pressure Sensors

Used in instrumentation for airspeed indication.

- Low long-term drift
- High stability and repeatability

NOVA
SENSOR

Ultra Low Pressure Sensors

Used in instrumentation for barometric pressure/weather monitoring.

- Calibrated to -40°C to 125°C
- High stability and repeatability
- Digital output: 14bit or 18bit

FUEL SYSTEMS

Pressure Sensors

Measures fluid levels within the fuel system.

- Long-term stability
- High accuracy and repeatability

NOVA
SENSOR

Gas Detection Sensors

Detects the presence of certain gases that indicate fuel leakage.

- 0 to 100% LEL
- Approved EX-d
- Mechanically robust

SGX
SENSORTECH

Position Sensors

Provides liquid level feedback within the fuel system.

- Sealed for harsh environments
- Selectable working principle: Hall effect/reed switch
- Robust and reliable modular design

PIHER *sensing systems*

Ultrasonic Fluid Level Sensors

Continuously monitors SCR DEF levels and concentration for detection of water dilution.

- ±1% accuracy level and concentration

IN-CABIN AND GALLEY

Temperature Sensors

Provides in-flight temperature control for cabin comfort and service items.

- High accuracy
- long-term stability
- Rugged design for maximum protection and direct immersion in liquids or gases

THERMOMETRICS

Gas Detection Sensors

Detects the presence of Hydrocarbon gases that indicate fuel leakage.

- 0 to 10,000 ppm
- Linearized digital output
- Mechanically robust

SGX
SENSORTECH

Position Sensors

Detects when seatbelt is latched and provides alert to enforce mandatory usage during takeoff and landing.

- Sealed for harsh environments
- Selectable working principle: Hall effect/reed switch
- Robust and reliable modular design

PIHER *sensing systems*

Position Sensors

Detects position of overhead storage door and provides alert when door is not fully closed to prevent it from opening during flight.

- Miniature switch or position sensor
- Digital output
- Surface mount device (SMD) version

PIHER *sensing systems*

ENGINE

Speed & Position Sensors

Monitors wheel speed, engine speed and position of the engine.

- Variable reluctance and active hall effect or magneto resistive sensors
- Zero speed, large air gap capability
- Packaged to resist harsh environments

Ultrasonic Fluid Level Sensors

Continuously monitors liquid levels within tank or reservoir, including fuel, coolant and hydraulic fluids.

- ±1% accuracy
- Robust, non-contact sensing
- Slosh filtering
