

### FEATURES

- UL60950-1 recognised
- EN60950-1 certified
- UL60335-1 recognition pending
- ANSI/AAMI ES60601-1, 1 MOPP/2 MOOP's recognition pending
- Wide input voltage range 85-264VAC/ 70-400VDC
- Operating temperature range -40°C to 85°C
- 4kVAC isolation 'Hi Pot Test'
- 5V, 12V & 24V single regulated outputs
- Short circuit protection
- No optocoupler
- Low standby power

### PRODUCT OVERVIEW

The BAC1 series is the first series release from the BAC family of board mount AC/DC converters. The BAC1 series operates over the wide industrial temperature range of -40°C to +85°C, supporting operation in still air for the most demanding environments. All models deliver full power to 85°C, and operate from -40°C. The BAC1 has ultra low standby power consumption for demanding energy and cost saving applications.

### TECHNICAL NOTES

#### ISOLATION VOLTAGE

'Hi Pot Test', 'Flash Tested', 'Withstand Voltage', 'Proof Voltage', 'Dielectric Withstand Voltage' & 'Isolation Test Voltage' are all terms that relate to the same thing, a test voltage, applied for a specified time, across a component designed to provide electrical isolation, to verify the integrity of that isolation.

Murata Power Solutions BAC1 series of AC-DC converters are all 100% production tested at their stated isolation voltage. This is 4kVAC for 1 seconds.

A question commonly asked is, "What is the continuous voltage that can be applied across the part in normal operation?"

The BAC1 series has been recognised by Underwriters Laboratory to 264VAC for Reinforced Insulation.

The BAC1 series has been certified by Demko to 264VAC for Reinforced Insulation.

#### REPEATED HIGH-VOLTAGE ISOLATION TESTING

It is well known that repeated high-voltage isolation testing of a barrier component can actually degrade isolation capability, to a lesser or greater degree depending on materials, construction and environment. We therefore strongly advise against repeated high voltage isolation testing, but if it is absolutely required, that the voltage be reduced by 20% from specified test voltage.

### SAFETY APPROVAL

#### ANSI/AAMI ES60601-1

The BAC1 series is pending recognition by Underwriters Laboratory (UL) to ANSI/AAMI ES60601-1 and provides 2 MOOP (Means Of Operator Protection) and 1 MOPP (means of patient protection) based upon a working voltage of 264VAC max., between Primary and Secondary. File number E202895 applies.

#### EN60950-1

The BAC1 series has been certified by Demko (D) to EN60950 for reinforced insulation to a working voltage of 264VAC. File number E151252 applies.

#### UL60950-1

The BAC1 series has been recognised by Underwriters Laboratory (UL) to UL60950 for reinforced insulation to a working voltage of 264VAC. File number E151252 applies.

Creepage and clearance 8mm

Working altitude OVC II 5000m

Working altitude OVC III 2000M

#### UL60335-1

The BAC1 series is pending recognition by Underwriters Laboratory (UL) to UL60335-1.

#### FUSING

As stated in the application notes, to meet datasheet specifications it is required that a 1W 10Ω fusible resistor is fitted.

### RoHS COMPLIANCE INFORMATION

This series is compatible with RoHS soldering systems with a peak wave solder temperature of 260°C for 10 seconds based on JEDEC JESD22-A111-A. The pin termination finish on this product series is Hot Dipped over Matte Tin with Nickel Preplate. The series is backward compatible with Sn/Pb soldering systems. Components required to meet datasheet specifications - 24V output types

FUSE	1W 10Ω fusible resistor
MOV	Component fitted for compliance with EN61000-4-5, Installation class 3, perf criteria A
L1	330μH
C1	6.8μF 400V
C2	47μF 25mΩ low ESR polymer
D1	SMBJ30A transient voltage suppressor - component fitted for overshoot protection

**Advisory Notes**

The BAC1 series is not hermetically sealed, customers should ensure that parts are fully dried before input power application.

**APPLICATION NOTES (continued)**

**Output Capacitance and start-up times**

The recommended specified caps on page 4 and 5 can already meet datasheet specification, there is no need to add extra caps. However, if customers connects to load capacitance, the below load capacitance are max (additional to recommended specified caps) to ensure start up at minimum AC input.

Part No.	Maximum Load Capacitance (per output)	Start-up times (AC input)	Start-up times (DC input)
	$\mu\text{F}$	s	s
<b>BAC1S05SC</b>	220	0.5	5
<b>BAC1S12SC</b>	100	1	5
<b>BAC1S24SC</b>	100	1	5

**Minimum Load**

The minimum load to meet full datasheet specification is 5% of the full rated load across the specified input voltage range.

**24V output type - minimum input voltage requirements**

At -40C the part is guaranteed to start into 100% load with a minimum input voltage of 115Vac; once the product is operating, the product will continue to operate at lower input voltages with higher output loading.

The product will start at -40C with 80% or lower load with an input voltage of 100VAC; once the product is operating, the product will continue to operate at lower input voltages with higher output loading.

**CHARACTERISATION TEST METHODS**

**Ripple & Noise Characterisation Method**

Ripple and noise measurements are performed with the following test configuration.
