Polarized Power Relays

DK Series

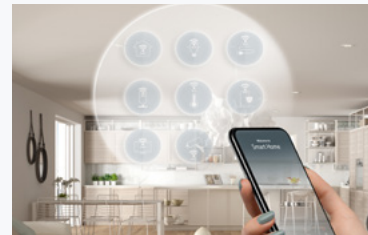

10mm flat 10A relay for minature IoT applications

Relay cards, slim output modules or any kind of IoT application often require a low component height - DK series with only 9.7mm height plus 0.3mm stand-offs is the perfect solution. Even if the housing is small, the strong silver alloy contacts are capable to switch 10A for 1NO and 8A for 1NO 1NC / 2NO versions. DK relay offers 8mm creepage and clearance between contact and coil (6.8mm for 2 pole types with 2 coils) to meet various normative requirements. Sockets for a quick change of the relays are available for all types.

Key Features

- Small housing
- High sensitivity: 200mW (single side stable or latching type)
- Sealed construction - RTIII
- Low height - 10mm
- UL/CSA, VDE approved
- Manual switch type available

Smart Home

- Smart plugs
- Smart switch
- Light-shutter control

Output Relays

- PLC
- Temperature controllers
- Timers

Control Relays

- Robotics
- Numerical control machines
