

Product/Process Change Notification

Moisture Sensitivity Level (MSL) Reclassification for Tantalum Capacitors; Military, High Reliability and Space Grade.

Date: 8/13/2026	ID Number (MMDDYY): PCN-081326-UMQ
Affected Products	Tantalum Surface Mount Capacitors, High Reliability Series: T493, T495, T496, T497 and T513. Space Grade Series: T493, T496, T497 and T510. Military Series: T409, T419, T429, T492. <i>“Commercial and Automotive Grade versions of the series listed above will not be impacted with the change.”</i>
Change	KEMET/YAGEO will now classify the products under the series mentioned above as Moisture Sensitivity Level 3 (MSL3) in accordance with J-STD-020F.

Justification and Benefits	Originally in 2001, these products were classified as MSL1 in accordance with J-STD-020A. While this standard primarily applied to integrated circuits, we adapted parts of the document to provide guidance on our own surface mount capacitors. As an internal process improvement effort to implement best practices for passive component storage and handling, in December 2015 and in accordance with J-STD-033 for MSL3, KEMET began packaging and shipping the products above in sealed moisture barrier bags (MBBs) with desiccant and humidity indicator cards (HICs) to alleviate the potential for long term exposure to high humidity conditions during shipping and storage. MSL testing has been added to both Qualification and Group C (Periodic Inspection) in revision K of MIL-PRF-55365. With defined requirements having been established for MSL for tantalum capacitors, KEMET started MSL testing on these products during 2025 and it was determined to reclassify all products above as MSL3 with the following goals: 1. To minimize the potential for any product defects and align the customer's handling recommendations with our own internal best-practices procedure. 2. To categorize all parts uniformly as MSL3 to reduce complexity for periodic testing requirements and for customer handling. 3. To align our CWR and HRA tantalum capacitors MSL classification with other tantalum capacitor manufacturers of similar form factors. For any affected product currently in your inventory, we recommend reviewing your internal handling and storage practices against the applicable guidance in J-STD-033. This will help ensure parts are stored, handled, and prepared for reflow in a manner consistent with the updated classification. If parts are supplied in tape and reel, please ensure that any baking process does not exceed the maximum allowable temperature for the packaging materials. If needed, KEMET can provide additional guidance to support your evaluation of existing inventory.
Effective Date and Identification	KEMET/YAGEO will modify all packaging, datasheet, and content to reflect the new MSL classification within 90 days after this notification. The document update to MIL-PRF-55365 which will reclassify MSL will be managed by the Defense Logistics Agency (DLA) and may occur before the KEMET/YAGEO documents have been updated.

Upcoming PCN: Moisture Sensitivity Level (MSL) Reclassification for Tantalum Capacitors; Military, High Reliability and Space Grade

Questions and Answers Guide

In short, KEMET/YAGEO will now officially classify CWR and high-reliability MnO₂ surface-mount tantalum as Moisture Sensitivity Level 3 (MSL3) in accordance with J-STD-020F. Please refer to the following list of questions and answers for some of the anticipated questions regarding this change.

Please reach out to your local YAGEO Group Sales Representative for more information.

1. What is the difference between MSL1 and MSL3 per J-STD-020F?
 - MSL1 parts have unlimited floor life under standard factory conditions, while MSL3 parts have a controlled floor life after the moisture barrier bag is opened. For MSL3 handling, parts should be stored, tracked, and prepared for reflow in accordance with J-STD-033 guidance.
2. Has there been a material change or form, fit, or function change in these products to initiate this change?
 - No. There have been no changes to the material sets, designs, manufacturing process, or packaging of these capacitors resulting from or because of this reclassification.
3. Why is this change happening to high-reliability and military tantalum MnO₂ capacitors but not to commercial or automotive grade products?
 - KEMET/YAGEO is applying MSL3 handling to military, high-reliability, and space-grade MnO₂ tantalum products because these product families are subject to periodic maintenance testing requirements that now include MSL testing with zero allowance for defects. This includes cosmetic defects such as cracks in the epoxy case. **Commercial and automotive-grade products are not subject to these regulations.**
 - When a failure occurs during periodic maintenance testing, according to the Defense Logistics Agency requirements, the entire product family is placed on shipment hold while a root cause and corrective action are found. By taking a precautionary approach to classifying and handling our high-reliability product, we greatly minimize the risk of an unwanted shipment hold, and we maintain the ability to supply these critical components to our valued defense/aerospace customers.
 - Commercial and automotive-grade MnO₂ tantalum products will continue to follow their existing qualifications, specifications, and handling requirements unless MSL3 handling is specifically identified in the applicable product documentation.
 - Surface mount MnO₂ tantalum capacitors have existed since the 1980s and have been classified as MSL1 devices. Even now, these capacitors continue to perform well in a wide variety of environmental conditions by following general best practices in the industry like minimizing moisture prior to board mounting. If your handling process for these capacitors has worked without issue, it is unlikely that you will need to make any change in your handling process of these products.

4. Is there any issue in storing commercial or automotive-grade products using MSL3 guidelines?
 - No. There would be no negative consequences or effects to the capacitors.
5. For the affected products, will the outer packaging (foil bag) change as a result?
 - No. In December 2015, KEMET began packaging and shipping the products above in sealed moisture barrier bags (MBBs) with desiccant and humidity indicator cards (HICs) to alleviate the potential for long term exposure to high humidity conditions during shipping and storage. These packaging conditions are already in accordance with J-STD-033 for MSL3. This was done as a precautionary effort to implement best practices for passive component storage and handling.
 - The label on the outside of the MBB will now show as “MSL3” instead of “MSL1”.
6. How should these products be handled if they have been stored in your inventory as MSL1?
 - If the bag has not been opened, there is no action to take since the parts are already packaged in accordance with J-STD-033 for MSL3.
 - When the packaging is opened for use, inspect the humidity indicator card (HIC) within the moisture barrier bag (MBB) just prior to mounting to ensure that the MBB is still functioning properly. It is good practice to always check the HIC regardless of shelf life to ensure that the MBB was not damaged or compromised in any way.
 - For opened packages with unused capacitors, KEMET/YAGEO recommends reviewing J-STD-033 handling and storage guidance. If the parts have been exposed beyond the allowable MSL3 floor life, customers should evaluate whether baking is appropriate before reflow, while ensuring that any bake process does not exceed the limits of the tape-and-reel or other packaging materials.
7. These parts were stored as MSL1 and have been board mounted. Are there concerns about the performance of these parts?
 - If the parts were baked using appropriate moisture-sensitive device handling guidance before mounting, that bake process would be expected to help reduce moisture-related risk before reflow. For parts that have already been assembled, customers can review the handling history, bake conditions, reflow process, and normal post-assembly inspection or electrical test results. If the parts successfully passed the customer’s standard assembly and verification process, no additional action is typically expected.
8. Will these parts need to be received and stored differently with the new classification prior to opening the bag?
 - No special storage change is needed before the sealed moisture barrier bag is opened, provided the bag remains intact. Once opened, any remaining unused parts should be handled according to MSL3 requirements, including floor-life tracking and appropriate storage controls.
9. What are the equivalent military part numbers to the KEMET series?
 - KEMET T409 = CWR09
 - KEMET T419 = CWR19
 - KEMET T429 = CWR29
 - KEMET T492 = CWR11
10. Will the price be increasing due to this change?
 - No. There will be no changes in product pricing due to this change.
